

Mastering Linux Essentials

A Step-by-Step Guide to Enhancing Command Line Proficiency

Linux Command Line Practice

This guide will walk you through a series of exercises designed to help you practice basic Linux command line skills. Each exercise builds upon the previous one and introduces new commands and concepts. By the end, you'll have a better understanding of directory and file management in Linux.

Exercise 1: Create a Practice Workspace

1. **Create a separate folder** to ensure you don't accidentally modify important files.
2.

```
mkdir linux_file_practice  
cd linux_file_practice  
pwd
```
3. ✓ You should see a path ending with linux_file_practice.

Exercise 2: Create Directories

1. **Create two folders** within your practice directory:
2.

```
mkdir docs images  
ls
```
3. ✓ Output should show:
4. docs images

Exercise 3: Create Files

1. **Create text files** inside the docs directory:
2.

```
cd docs  
echo "This is file one" > file1.txt  
echo "This is file two" > file2.txt  
ls
```

Exercise 4: View File Contents

1. **Try different commands** to view file contents:

2. `cat file1.txt`
`tac file1.txt`
`less file2.txt`
3. ♦ Press `q` to exit `less`.

Exercise 5: Add More Content

1. **Append text to a file:**
2. `echo "Appended line" >> file1.txt`
`cat file1.txt`

Exercise 6: Head and Tail

1. **Add multiple lines** to a file for more practice:
2. `echo -e "Line1\nLine2\nLine3\nLine4\nLine5" >> file1.txt`
`head -n 3 file1.txt`
`tail -n 3 file1.txt`

Exercise 7: Copy Files

1. **Copy file1.txt** to create a backup:
2. `cp file1.txt file1_copy.txt`
`ls`

Exercise 8: Move and Rename Files

1. **Rename a file:**
2. `mv file2.txt renamed_file2.txt`
`ls`
3. **Move a file** to another directory:
4. `mv file1_copy.txt ../images/`

Exercise 9: Edit a File

1. **Open a file with nano**, a beginner-friendly text editor:
2. `nano file1.txt`
3. ♦ Edit text and then:
 - Press `Ctrl + O` → `Enter` (to save)
 - Press `Ctrl + X` (to exit)

Exercise 10: Directory Navigation

1. **Practice moving around directories:**
2. `cd ..`
`ls`
`cd images`

ls
pwd

Final Step: Delete Everything Safely

⚠ **IMPORTANT:** Always verify your current directory before deleting to avoid accidental data loss.

1. **Check your current directory:**
2. pwd
3. Make sure you are **not** in / or your home directory.
4. **Go outside the practice folder:**
5. cd ..
6. **Delete the entire practice folder:**
7. rm -r linux_file_practice
8. ✓ This command deletes all files and folders you created.
9. **Confirm deletion:**
10. ls
11. linux_file_practice should be gone, confirming that the deletion was successful.
