

MASTERING LINUX COMMAND LINE

A Beginner's Step-by-Step Guide to Essential
Commands

Beginner's Guide to Linux Command Line: Step-by-Step Exercises

Welcome to your hands-on journey through some essential Linux commands! In this guide, you'll create a practice workspace, learn to manage files, and safely clean up when you're done. Let's get started!

◆ Exercise 1: Create a Practice Workspace

First, create a separate folder to keep your practice work isolated from important files.

```
mkdir linux_file_practice
cd linux_file_practice
pwd
```

✓ You should see a path ending with linux_file_practice.

◆ Exercise 2: Create Directories

Make two new folders within your workspace:

```
mkdir docs images
ls
```

✓ Output should show:

```
docs images
```

◆ Exercise 3: Create Files

Create text files inside the docs directory:

```
cd docs
echo "This is file one" > file1.txt
echo "This is file two" > file2.txt
ls
```

◆ Exercise 4: View File Contents

Explore different commands for viewing file contents:

```
cat file1.txt
tac file1.txt
less file2.txt
```

◆ Press q to exit less.

◆ Exercise 5: Add More Content

Append additional text to a file:

```
echo "Appended line" >> file1.txt
cat file1.txt
```

◆ Exercise 6: Head and Tail

Add multiple lines and use head and tail:

```
echo -e "Line1\nLine2\nLine3\nLine4\nLine5" >> file1.txt
head -n 3 file1.txt
tail -n 3 file1.txt
```

◆ Exercise 7: Copy Files

Copy your file in the docs directory:

```
cp file1.txt file1_copy.txt
ls
```

◆ Exercise 8: Move and Rename Files

First, rename a file:

```
mv file2.txt renamed_file2.txt
ls
```

Next, move a file to another directory:

```
mv file1_copy.txt ../images/
```

◆ Exercise 9: Edit a File

Edit a file using nano, a beginner-friendly text editor:

```
nano file1.txt
```

- ◆ Edit the text as you like.
 - ◆ Press Ctrl + O → Enter (to save).
 - ◆ Press Ctrl + X (to exit).
-

◆ Exercise 10: Directory Navigation

Practice moving around directories:

```
cd ..
ls
cd images
ls
pwd
```

Final Step: Delete Everything Safely

⚠ Important Rule

Always check your current directory before deleting files.

```
pwd
```

Ensure you're **NOT** in / or your home directory.

◆ Step 1: Go Outside the Practice Folder

cd ..

◆ Step 2: Delete the Entire Practice Folder

```
rm -r linux_file_practice
```

✓ This command deletes **all files and folders you created**.

◆ Step 3: Confirm Deletion

```
ls
```

linux_file_practice should be gone.

What You Learned

- ✓ How to create and manage files and directories
- ✓ Viewing and editing file contents
- ✓ Copying and moving files
- ✓ Safe deletion practices

Congratulations! You've completed the beginner's command set and gained valuable skills in navigating the Linux command line. Keep practicing to enhance your proficiency!
